

COVID-19 Data in the CurrentCare Viewer

Last Updated: April 20, 2022

As COVID-19 data changes, we'll continue to update this PDF with a list of data sharing partners that send COVID-19 information to CurrentCare, and other tips on viewing the data.

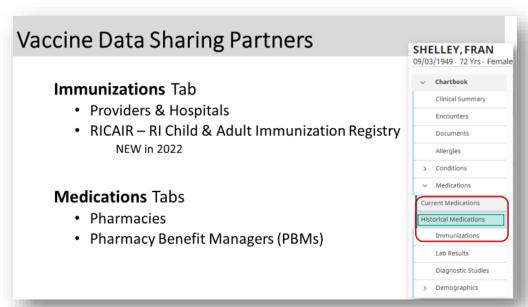

Table of Contents

- COVID-19 Vaccines
- COVID-19 Lab Results:
 - Data Sharing Partners
 - Tips on Viewing

COVID-19 Vaccines

Vaccines are displayed differently, based on the organization that is sharing data with CurrentCare:

- Immunizations tab: you'll see many types of vaccines from clinical providers and hospitals, including COVID-19 vaccine data from Rhode Island's Child and Adult Immunization Registry (RICAIR). Learn more about RICAIR data in the Viewer in this 3-minute Tutorial.
- Current Medications & Historical Medications tabs: you'll see vaccines that were administered at pharmacies or through Pharmacy Benefit Managers.

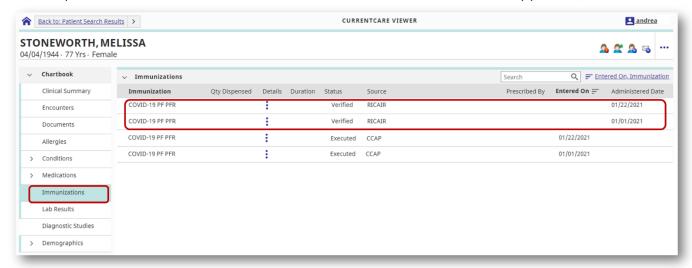

Note: As with other medications, it's common to see multiple rows for the same vaccine that were entered by different healthcare facilities. If a patient received a dose at Facility A, but providers at Facility B and Facility C also entered that dose into their records, you might see it multiple times.

SAMPLE 1 (Immunizations Tab)

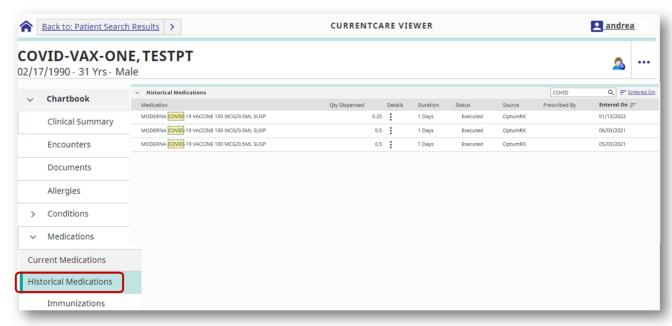

This example shows data on the Immunizations tab from both RICAIR and a community provider, CCAP:

Note about RICAIR vaccines: This registry collects data for vaccines that are administered within Rhode Island and for RI residents vaccinated in Massachusetts, and now shares the COVID-19 vaccine data with CurrentCare. The COVID-19 vaccines from RICAIR display on the **Immunizations** tab with a Status of "Verified" and are opened by clicking the "Details" link.

- The Status of "Verified" is a default value in our system and does not mean that RICAIR or RIQI
 can verify that the vaccine information received from the administering facility is correct.
- Vaccines administered outside Rhode Island may not be available as RICAIR data.
- Vaccine data will not be available from RICAIR if a patient has blocked data sharing via RICAIR's website.

SAMPLE 2 (Current Medications & Historical Medications Tabs)

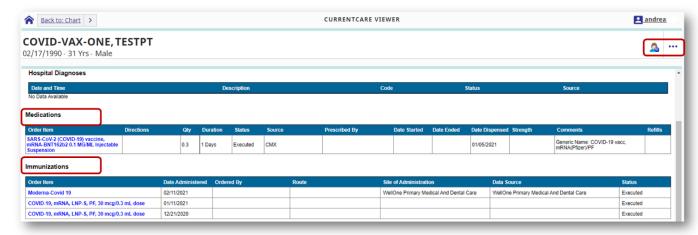

SAMPLE 3 (Summary Report)

Click the ellipsis (3 dots) in the top right of each patient record & click "Summary Report."

COVID-19 Vaccinations can be found under the Medications and Immunizations Sections:

COVID-19 Lab Results

COVID-19 Lab Result Data Sharing Partners

As of 2/22/21, RIQI is receiving COVID-19 lab results from the following labs:

- Care New England Hospitals (Kent, Women & Infants)
- CharterCARE Hospitals (Roger Williams, Fatima)
- Coastal Medical
- CVS Minute Clinics
- Dominion Diagnostics **
- East Side Clinical Labs
- Landmark Hospitals (Landmark, RHRI)
- Lifespan Hospitals (RIH, Miriam, Newport)
- Quest Diagnostics (limited to residents of RI or those with a Primary Care Physician in RI)
- RI Department of Health
- South County Hospital
- Westerly Hospital

Tips on Viewing COVID-19 Lab Results

Any results that are sent to RIQI are available to providers immediately in the CurrentCare Viewer, and to patients in CurrentCare for Me (after a delay of 1 business day).

Over time, we have seen significant variation in the display of COVID-19 lab results.

You will likely see COVID-19 Diagnostic test results and Antibody test results.

The names of the Diagnostic tests vary widely over time and by testing organization, and include: COVID19, Coronavirus, SARS-Cov-2, SARS COVID ANTIGEN-FIA and similar, but also less obvious titles such as Micro Miscellaneous, Respiratory Pathogen Panel and ABB.COV.

^{**}Note: you may notice that some COVID-19 results are missing. Some testing sites don't always collect complete demographic data, which is required for RIQI to safely identify patients within CurrentCare.

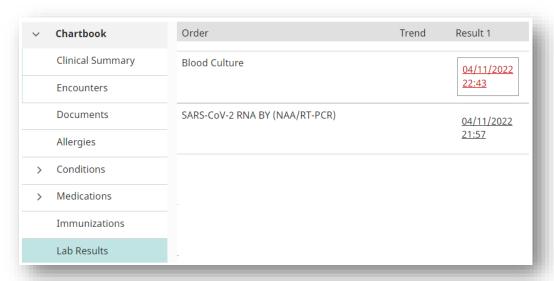

The names of the Antibody tests could include names such as: SARS-CoV-2 IgG, SARS-CoV-2 IgM, SARS-CoV-2 Total Antibodies.

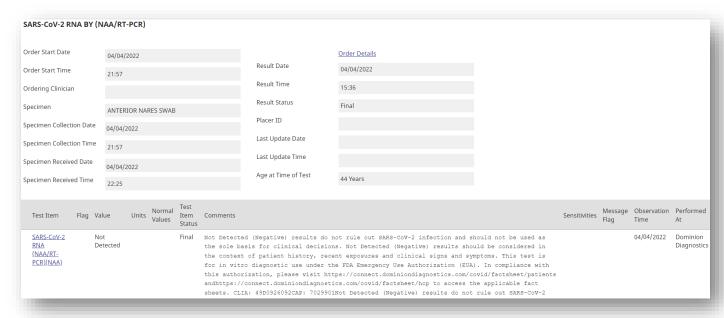

IMPORTANT: Some results are not immediately recognizable as positive or negative. Even if the link to the lab result appears normal on the main 'Lab Results' tab, we suggest that you open the report and look for the words Positive, Negative, Detected or Not Detected.

Here are examples of what you could see in CurrentCare Viewer based on where the test was administered (the following information includes mock names, DOBs, and dates):

SAMPLE 1

Lastly, not all institutions send COVID-19 data to RIQI. We are actively working to assess the gaps and to increase availability. Please reference the **CurrentCare Data Guide** for a list of data sharing partners that send to CurrentCare.

Don't forget that we have the 'Forgot username?' and 'Forgot password?' options on the CurrentCare Viewer login page. Please reach out to CurrentCare@riqi.org or **888.858.4815** if you have questions.
