

COVID-19 Vaccine & Test Data in CurrentCare for Me

NOTE: The following information contains only fake patient details, vaccine data and lab data.

Vaccines in CC4Me

Many data sharing partners send immunization data to <u>CurrentCare for Me</u> (CC4Me), which includes COVID-19 vaccines, flu, shingles and more. They can be viewed on the "My Immunizations" tab.

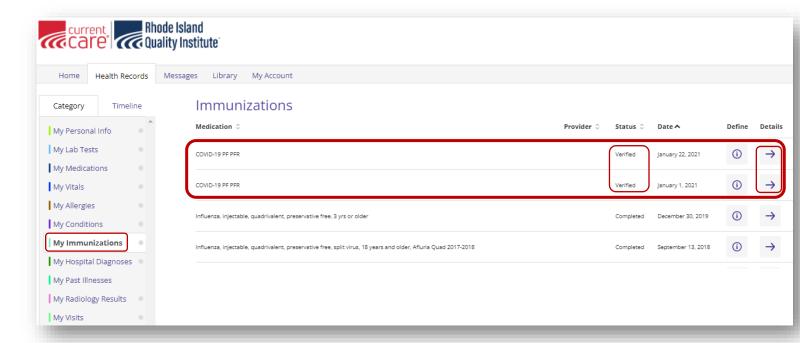

Note: As with other medications shown in CC4Me, it's common to see multiple rows for the same vaccine, that were entered by different healthcare facilities. If you received your vaccine at Facility A, but providers at Facility B and Facility C also entered that vaccine into their electronic medical records, you might see the same dose multiple times.

COVID-19 Vaccines from RICAIR in CC4Me

As of 1/31/22, in collaboration with the RI Department of Health, we are happy to announce that CC4Me now includes COVID-19 vaccine data from Rhode Island's Child and Adult Immunization Registry (RICAIR). This registry collects data for vaccines that are administered within Rhode Island and for RI residents vaccinated in Massachusetts, and now shares the COVID-19 vaccine data with CurrentCare.

The COVID-19 vaccines from RICAIR display on the "My Immunizations" tab with a Status of "Verified" and are opened by clicking the "Details" arrow. A few notes:

- The Status of "Verified" is a default value in our system and does not mean that RICAIR or RIQI can verify that the vaccine information received from the administering facility is correct.
- Vaccines administered outside Rhode Island may not be available as RICAIR data.
- Vaccine data will not be available from RICAIR if you have blocked data sharing via <u>RICAIR</u>'s website.

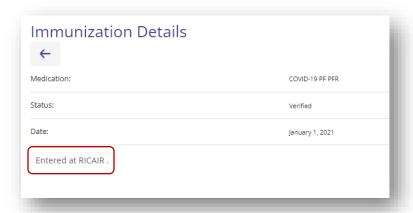

Last updated: April 19, 2022

Vaccines from RICAIR can be identified by the text "Entered at RICAIR" within the Immunization Details:

The COVID-19 vaccines from RICAIR can be identified by the following abbreviations:

Abbreviation	COVID-19 Vaccine Description
COVID-19 PF PFR - or -	Pfizer (12+ years)
COV19 PF PFR 12+	
COV19 PF PFR 5-11	Pfizer (5-11 years)
COVID-19 PF MOD	Moderna *
	* CurrentCare does not currently display whether Moderna
	vaccines are a full dose or a booster dose.
COVID-19 PF JSN	Johnson & Johnson (J&J/Janssen)

COVID-19 Lab Test Results in CC4Me

As of **12/17/20**, RIQI is receiving **COVID-19 lab results** from the following labs:

- o Care New England Hospitals (Kent, Women & Infants)
- CharterCARE Hospitals (Roger Williams, Fatima)
- Coastal Medical
- CVS Minute Clinics
- Dominion Diagnostics
- o East Side Clinical Labs
- Landmark Hospitals (Landmark, RHRI)
- Lifespan Hospitals (RIH, Miriam, Newport)
- Quest Diagnostics (limited to residents of RI or those with a Primary Care Physician in RI)
- o RI Department of Health
- South County Hospital
- Westerly Hospital

Last updated: April 19, 2022

IMPORTANT NOTE - TIMING:

COVID-19 results are available in CurrentCare for Me 1 business day after the lab is processed.

The lab can take multiple days to complete the test especially during high-volume periods, plus CurrentCare holds all lab results for $\underline{1}$ business day, to allow time for a provider to contact you.

Examples:

- Test taken on **Tuesday**, lab completes results on **Friday**, results will be available in CurrentCare for Me at the same time on **Monday**.
- Test taken on **Monday**, lab completes results on **Tuesday**, results will be available in CurrentCare for Me at the same time on **Wednesday**.

Test Result Location:

You can find lab results under "Health Records" on the "My Lab Tests" tab.

Test Names:

The test names vary, and can include: *COVID-19*, *Coronavirus*, *SARS-Cov-2*, Respiratory Pathogen Panel, and similar, but also less obvious titles such as *Micro Miscellaneous Test* or *Send Out Reference Test*.

IMPORTANT: The wording of these results can be confusing. Look for words in the "Value" or within the report itself.

For example, a "Value" of:

"Positive" or "Detected" is a positive result (meaning that COVID-19 was found)

"Negative" or "Not Detected" is a negative result (meaning that COVID-19 was not found)

Ignore the "Normal Range," which just explains that a normal result will show as "Not Detected."
